For your edification, some new screenshots from upcoming DS game Drone Tactics. For those who haven't heard of it (like myself, for instance), Drone Tactics is a sort of turn-based strategy game involving giant insect-like robots. What's not to love? In-game screenshots include Jet\_I ( a sort of cockroach robot), Kris-T (the moth), R-Neg the centipede (who comes up with these names?), and the spider-like Nyght-R.  
(And who doesn't love huge massive spider-like robots, I ask ye?)
